TI - ELECTRONIC COMPONENT INSTALLATION DEVICE

AB - PURPOSE: To install a reel cassette on a mounting plate after taking out its cassette at random when the kind of substrates is replaced by providing a comparison means and deducing an installation part on the mounting plate of a table reel at a prescribed position.

- CONSTITUTION: A reel cassette 3 equipped with a table reel 2 regarding latest substrates is prepared and the bar code 12 of the reel 2 of the cassette 3 to be installed is read by a bar code reader 16. Comparing and retrieving the inside of a reel installation data housing part 10, a control part 8 deduces an installation part 4 in which the table reel relating to kinds of components corresponding to the bar codes is to be installed. A mounting table drive part 13 makes the mounting plate 1 slide so that the installation part 4 can be deduced at a cassette replacing position 18. After replacing the cassette 3, the bar code 12 of the reel 2 of the cassette 3 to be installed in the next place is read by the bar code reader 16. In the same operation, the installation part 4 is deduced at the cassette replacing position 18.
